

BeSS report – July 2020

Data compiled by Valérie Desnoux – H-alpha monitoring

- 79 stars were observed
- 17 Observers contributed this month
- 152 Spectra

Observers...

Observateur	Nb spec
Thizy	70
Halsey	14
Bryssinck	13
James	11
Gurney	8
bertrand	6
Stiewing	5
Ventura	4
BERNARD	4
Desnoux	4
Bohlsen	3
Curry	2
MAETZ	2
GARREL	2
KREIDER	2
GARDE	1
Graham	1
Total général	152

Events of the month...

EE: Emission Event, ME: Moderate Events, DE: Decreasing Event

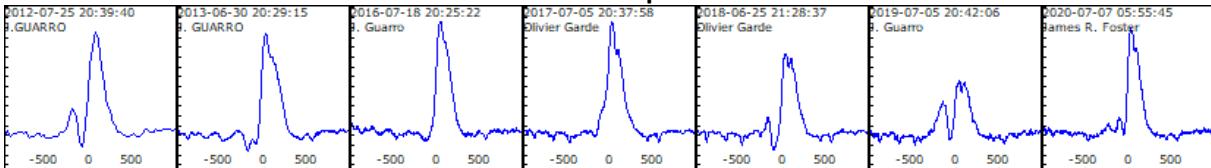

EE	ME	DE

Emission increase since last observations

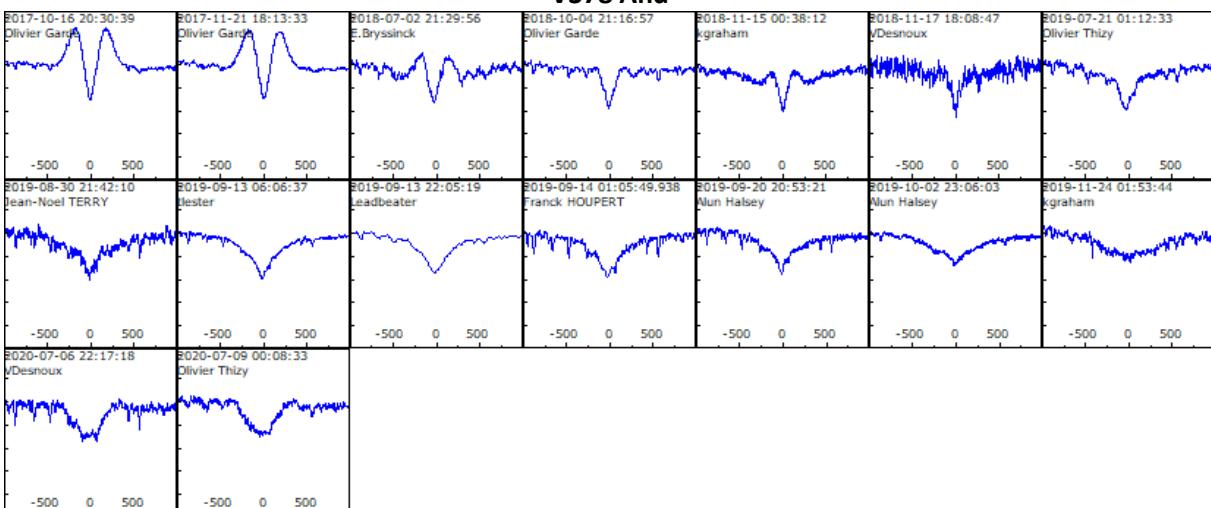

V2307 Oph

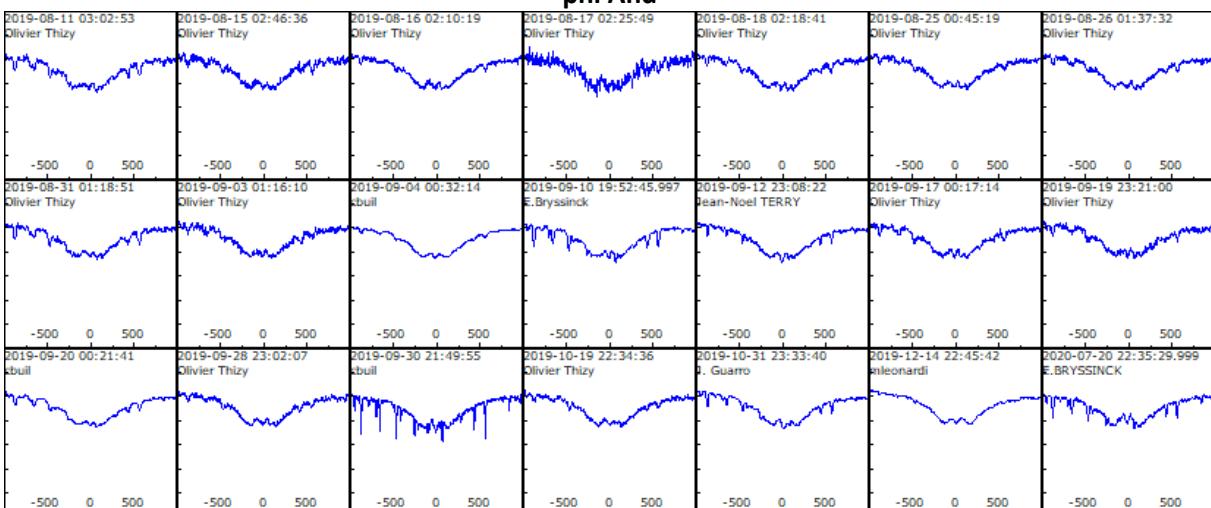

HD 174571

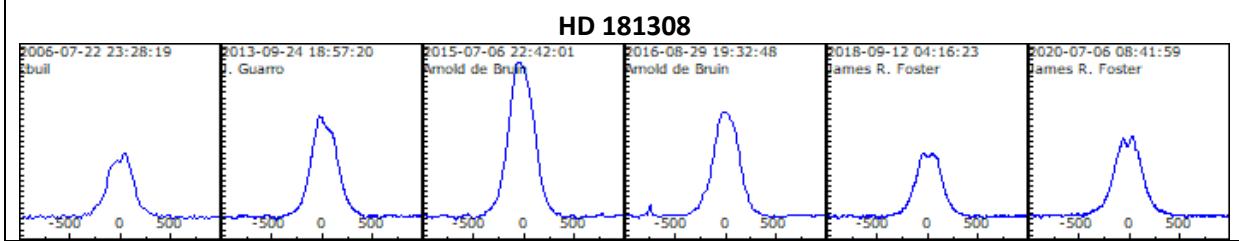

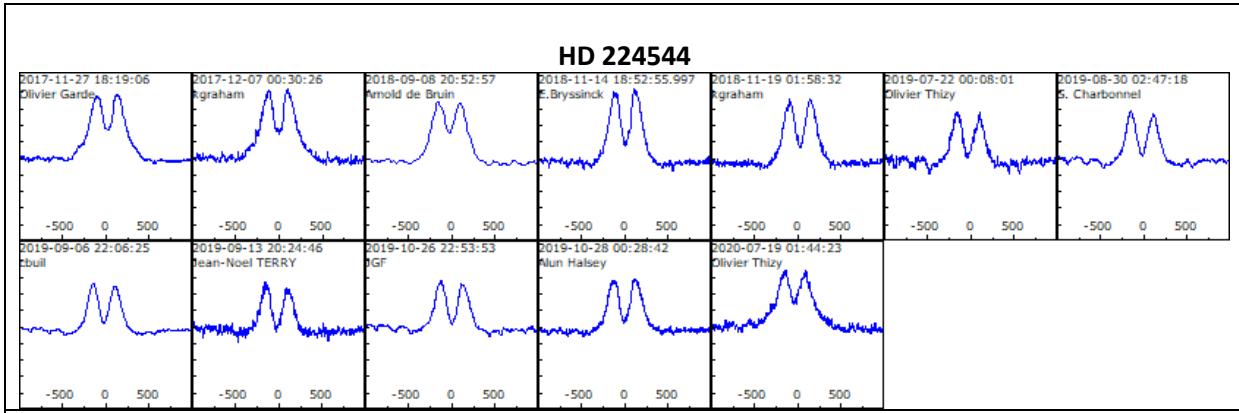

V378 And

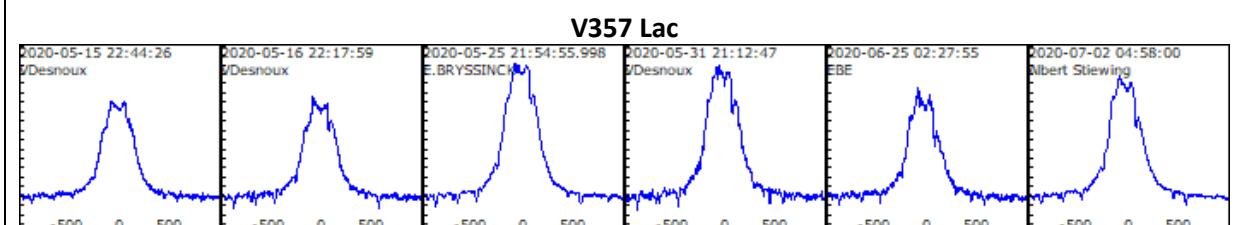

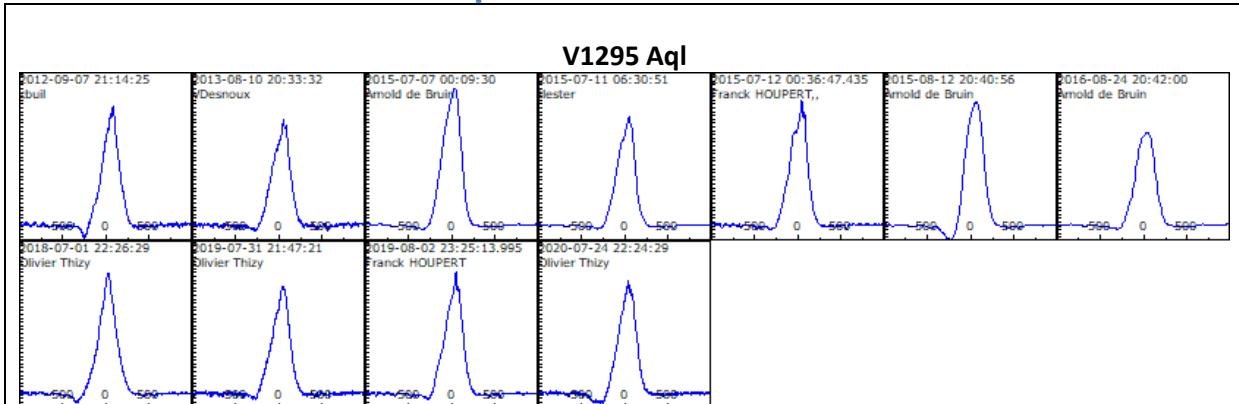

phi And

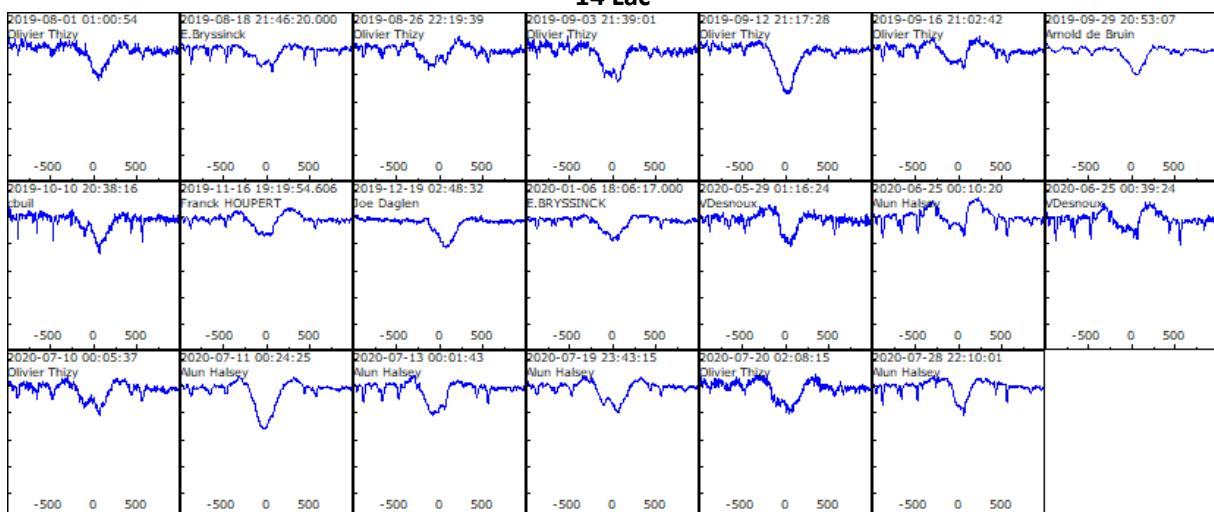

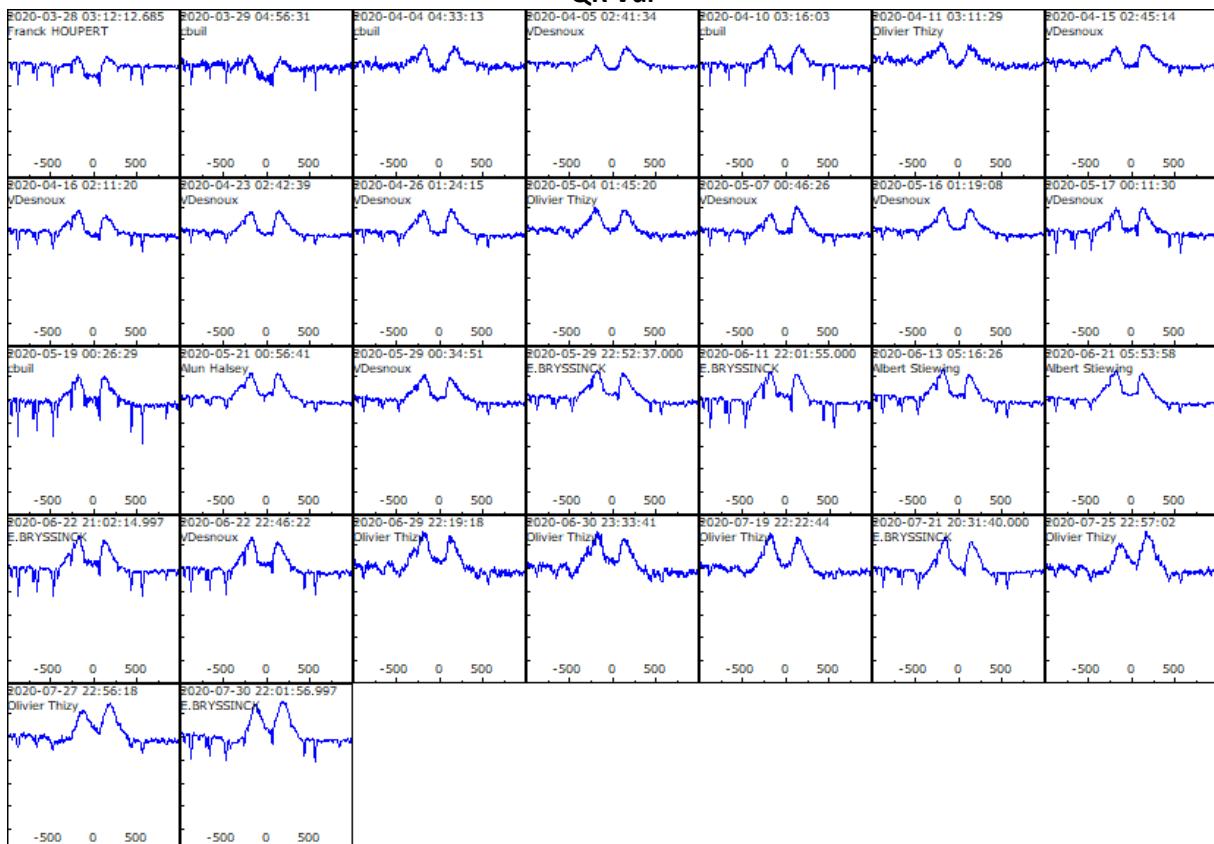

Moderate evolution of H-alpha line

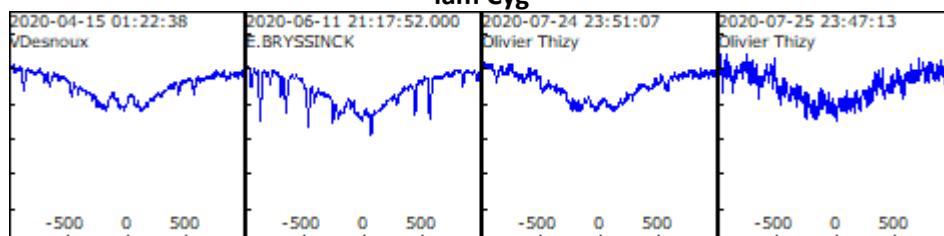

14 Lac

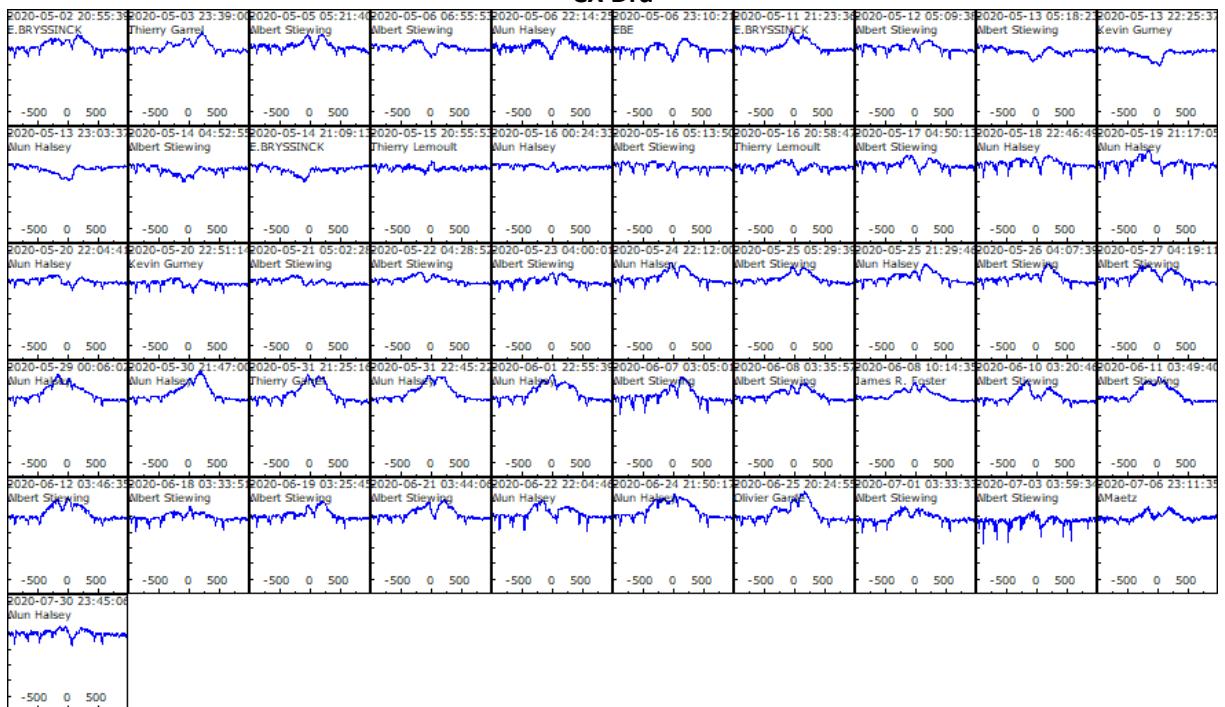

QR Vul

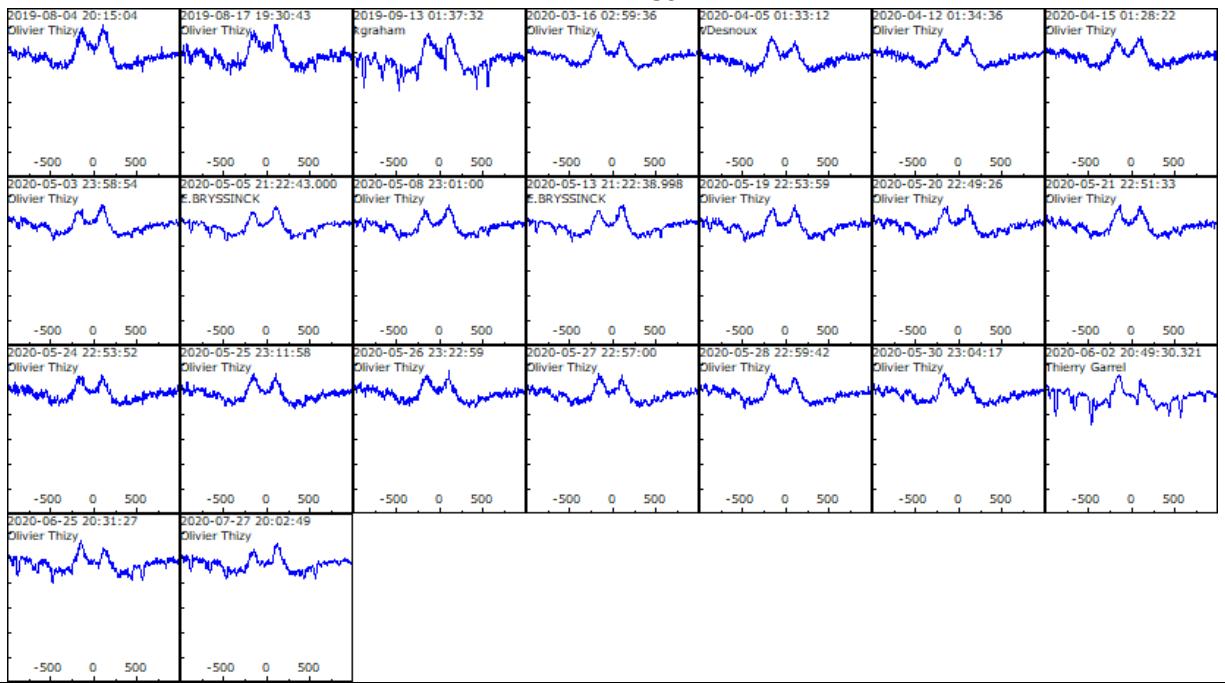

Iam Cyg

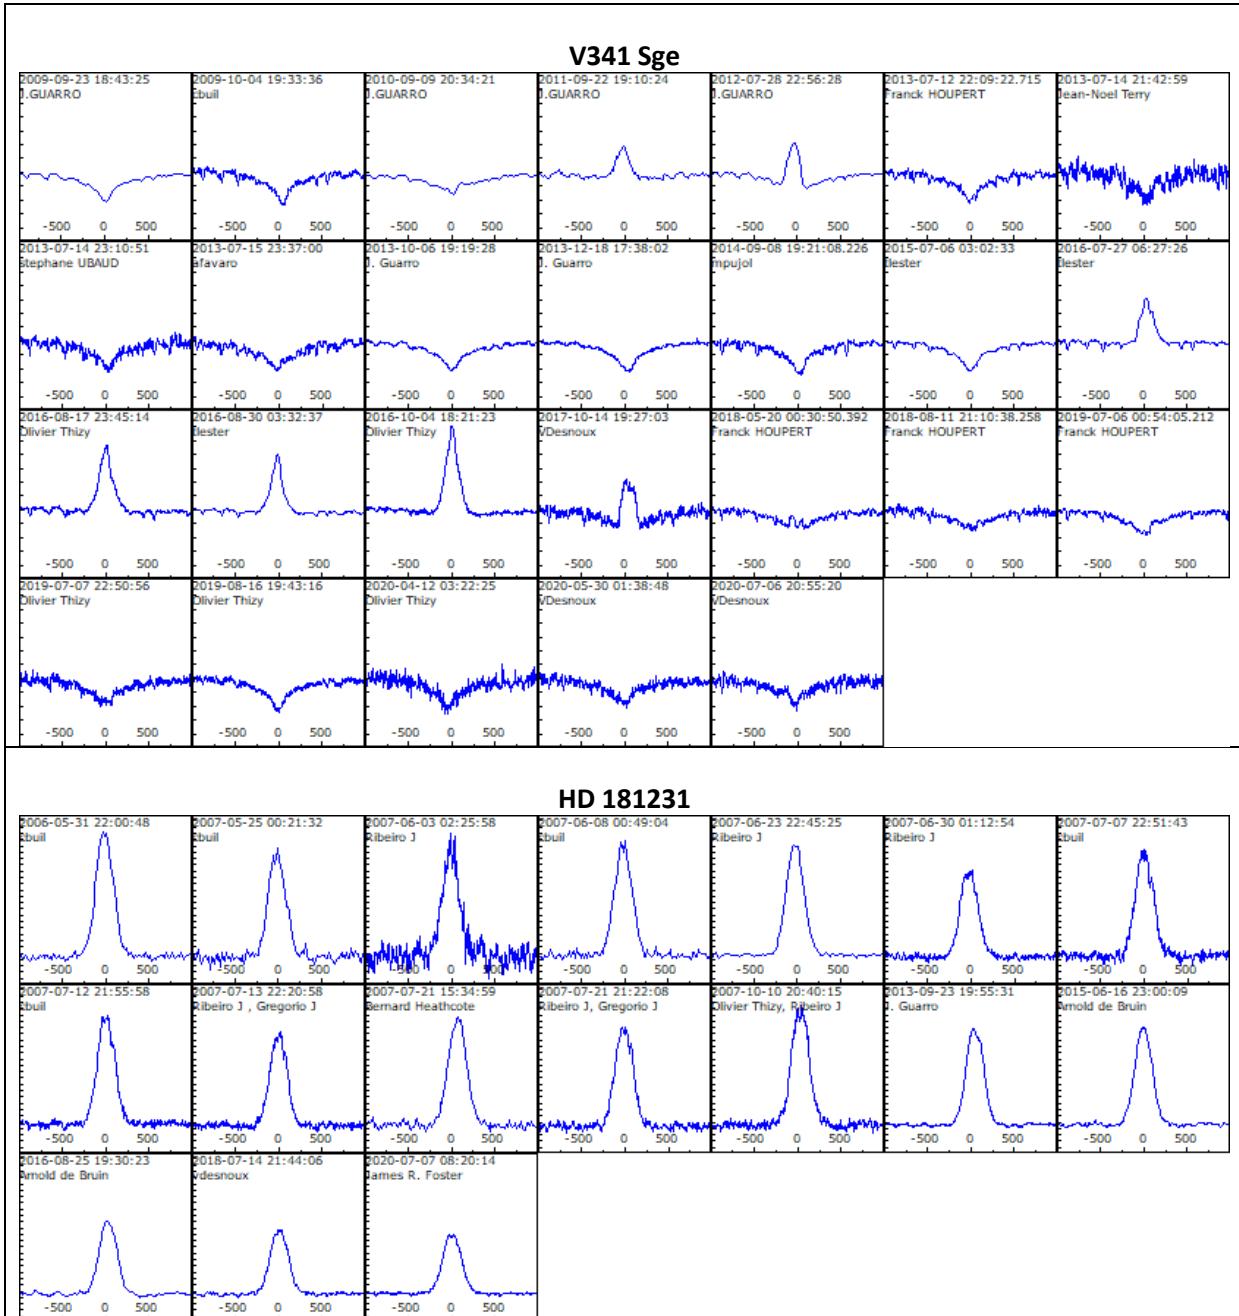

CX Dra

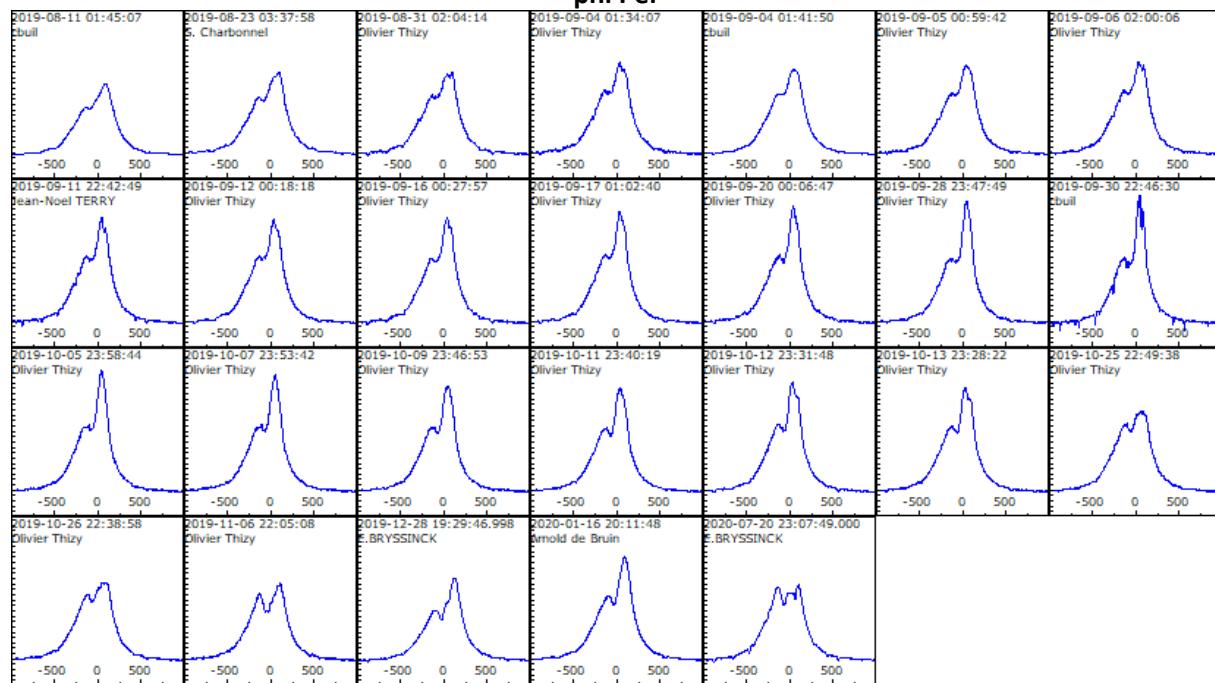

HD 171780

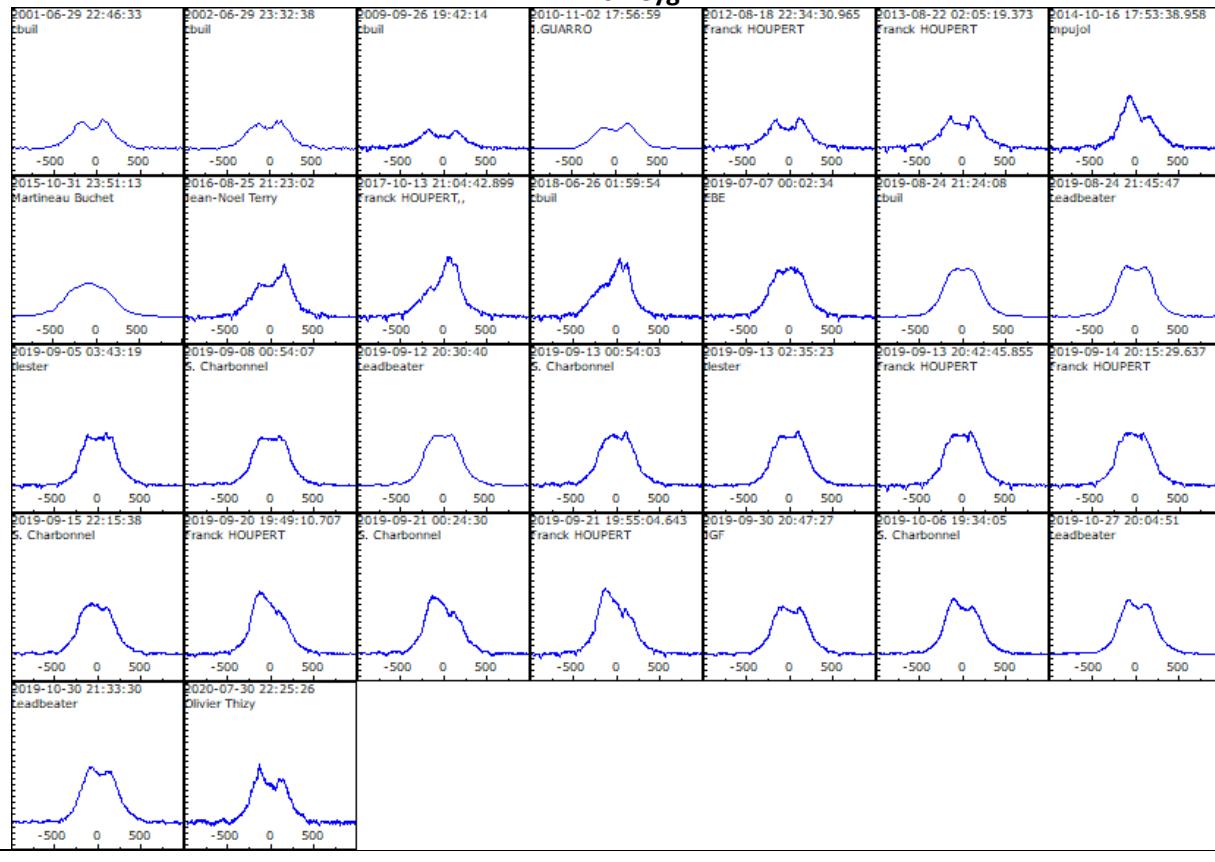

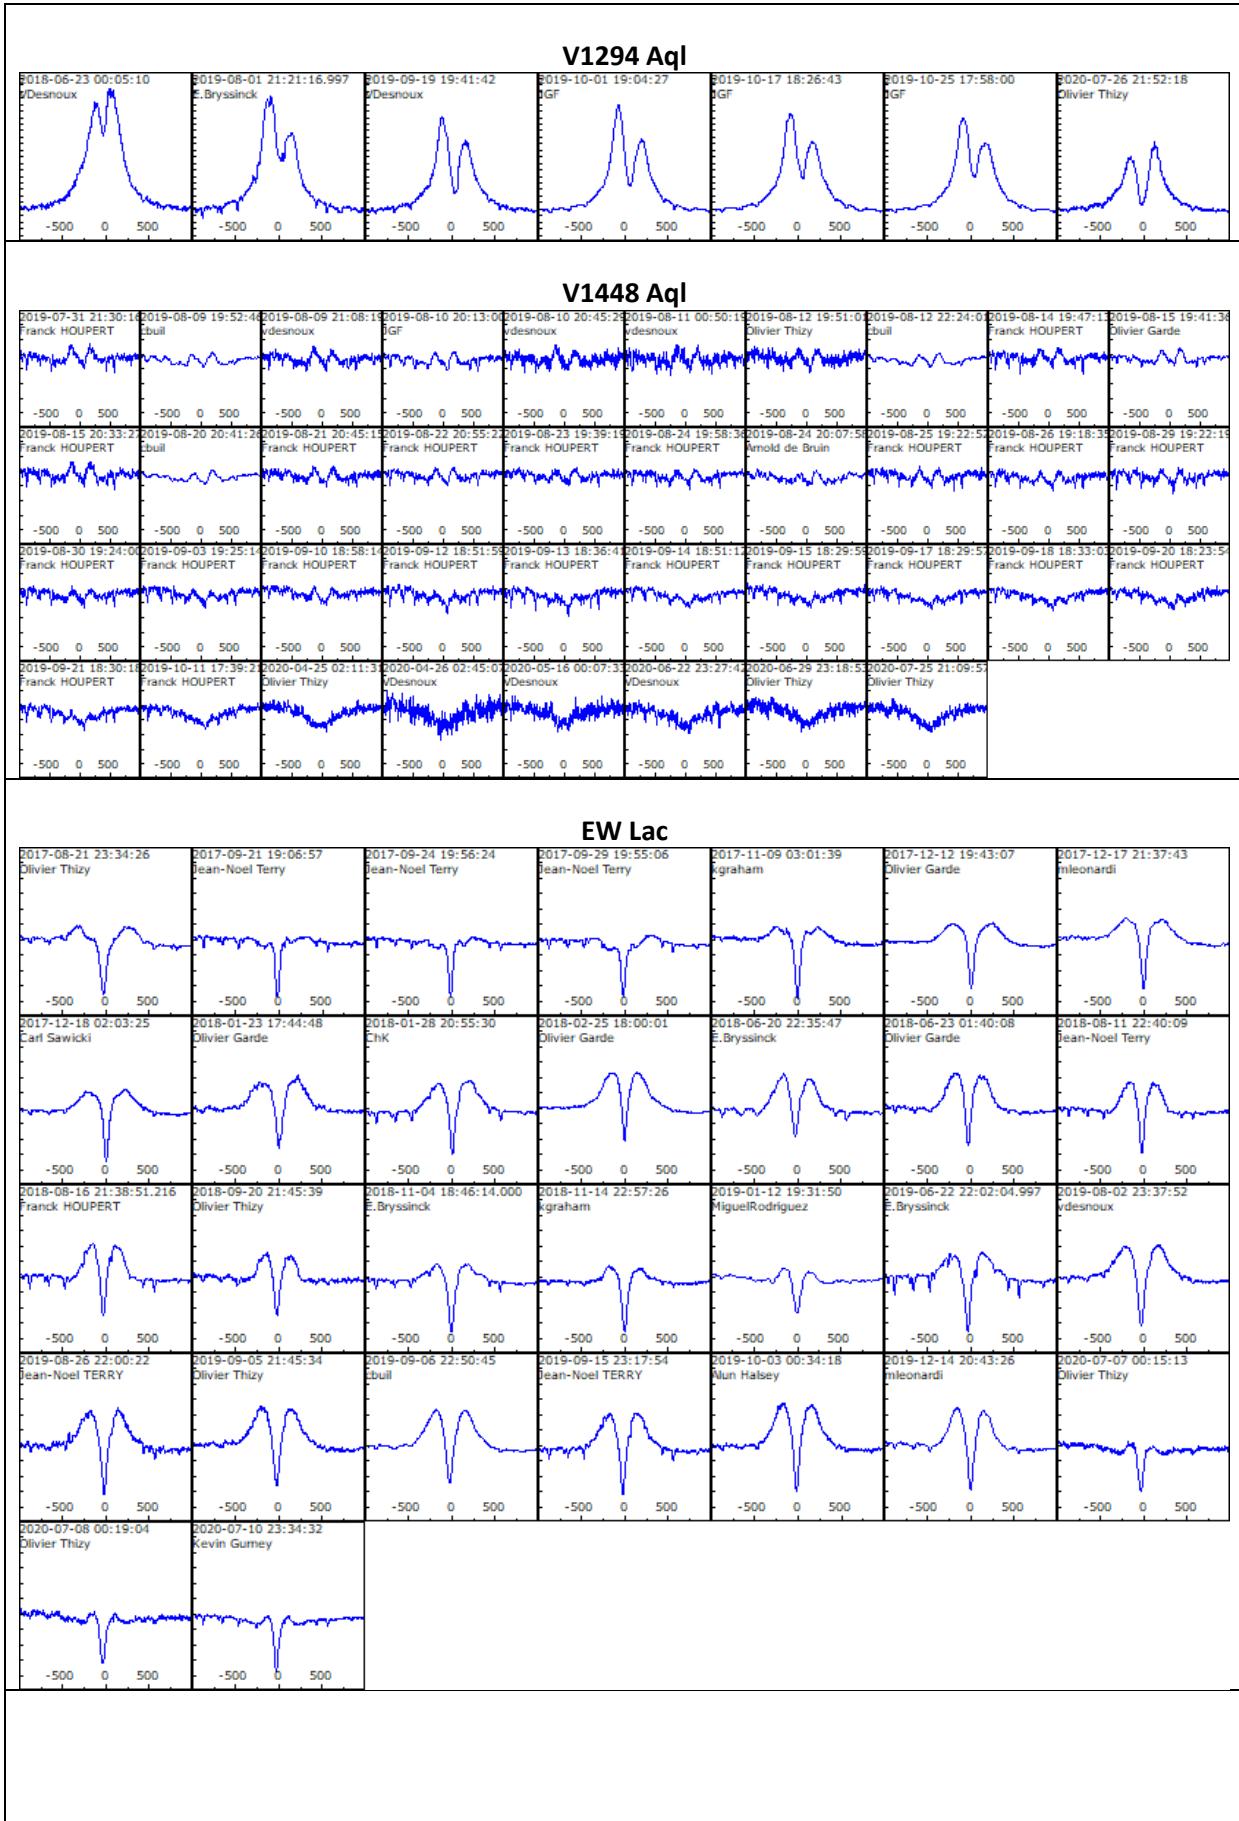

Emission decrease of H-alpha line

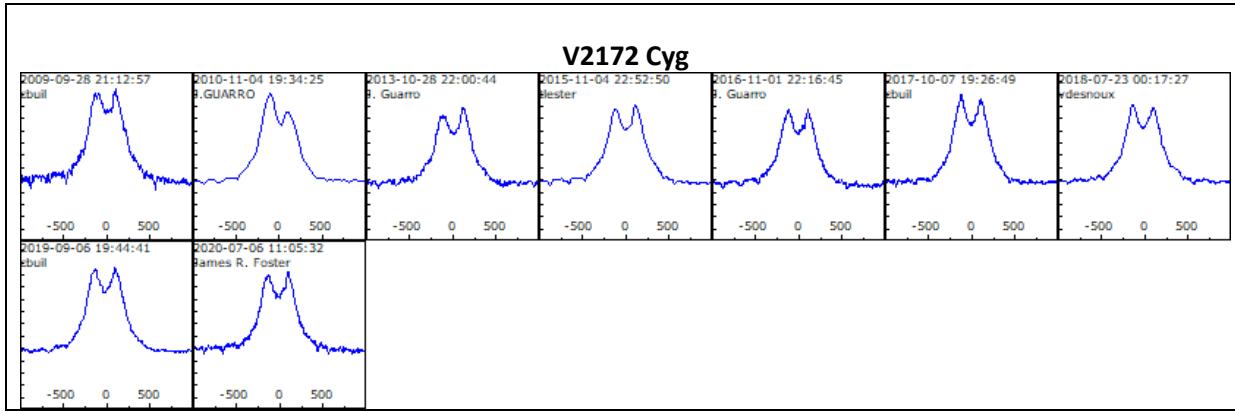

phi Per

V2162 Cyg

BeSS report Materiel & Method

For each star having a spectrum loaded in BeSS database for the monthly report the last six spectra in BeSS are displayed. A visual check is performed to detect any change in the H-alpha profile. Sometimes a copy/paste is needed for subtle evolutions.

For each star, which exhibits a change, the above series are generated with the following steps. Each spectrum is zoomed on the H-alpha line. Each profile is scaled on the continuum on a region around 6580 angströms. The x-axis is converted into Doppler velocity centered on H-alpha.

If too many spectra of the object are available, a shorter period of observation is displayed.

All data are processed with Visual Spec with dedicated function to automatically load BeSS spectra and automatize most of the above processing.
